

DSL SOLUTIONS

HIGH-SPEED BROADBAND FOR YOUR BUSINESS

IS.

It's important to assess the feasibility of using applications and cloud services that can help your employees to be more productive or improve the way you engage with your customers.

You need to factor in the amount of bandwidth they'll use and make sure your systems can cope by looking at your existing business broadband and whether it can support the size and volume of traffic that is generated.

A business DSL – digital subscriber line – is a convenient option for high-speed broadband Internet access. DSL Solutions is underpinned by our fibre network, giving you fast connectivity at more affordable rates than fibre solutions.

FAST INTERNET ACCESS FOR BETTER BUSINESS PERFORMANCE

Bandwidth as unlimited as you want it to be

AFFORDABLE AND ACCESSIBLE CONNECTIVITY

Capped and uncapped options to suit
your requirements

EASY MONITORING AND ACCESS TO SUPPORT

Stay in control of usage and costs

FAST INTERNET ACCESS FOR BETTER BUSINESS PERFORMANCE

Bandwidth as unlimited as you want it to be

Enjoy unshaped, secured connectivity

DSL Solutions uses existing copper phone lines to provide an Internet connection, but creates a separate connection to your landline. This means DSL Solutions is usually cheaper than fibre, and more widely available. With DSL Solutions, you'll have fast and reliable connectivity for accessing business information, as this high-speed broadband Internet service is underpinned by our fibre network.

Connectivity is unshaped, and you have a range of options for allowing or preventing certain types of traffic on the network, in line with your security and general usage policies. You also have the choice of either capping your bandwidth, if your usage is fairly predictable and stable, or selecting an uncapped option.

Bandwidth that suits your budget

Each organisation has unique and varied connectivity needs. Maybe you've only recently started implementing advanced communication technology and are testing it on only a few users.

Or perhaps you are doing a full-scale rollout of new cloud-based tools to your entire team. DSL Solutions gives you a wide range of options, enabling you to choose the bandwidth service that makes sense for your business as well as your budget. There's no big capital outlay or long-term commitment, as you're not investing in the connectivity infrastructure, and you don't have to maintain it. You just pay a fixed monthly fee for the service you've chosen.

Adjust supply as demand changes

There is no point in assessing your bandwidth feasibility if you aren't able to cater for growing demands. As organisations move ahead on their digital transformation journeys, they start using more sophisticated communication and collaboration tools while still expecting the same level of speed and service they are currently experiencing. It is almost inevitable that the demand for bandwidth will increase as your organisation makes use of more advanced applications, cloud services and communications technology – but this also puts more strain on your connectivity. DSL Solutions can meet this greater demand without any compromise in the speed or quality of service you're used to.

BUSINESS BENEFITS

AFFORDABLE AND ACCESSIBLE CONNECTIVITY

Capped and uncapped options to suit your requirements

Unshaped line treats all traffic equally

The DSL Solutions connection is unshaped, which means that all types of traffic travelling over the network – emails, document files, website data, voice and video communications – are given the same priority and contention ratio. Practically speaking, this means your online voice call won't suffer because an email transfer is given preference.

We offer two DSL Solutions options for you to choose from:

Capped bandwidth: DSL Extreme

If you have high Internet usage and know the amount of bandwidth you need each month, DSL Extreme offers a premium connectivity service over other DSL options. We manage the network closely to ensure ADSL services deliver the best performance.

Should you happen to run out of bandwidth in any given month, you can quickly top up with additional capacity from a self-service portal.

Uncapped bandwidth options

We offer two uncapped bandwidth options:

- **DSL Cruiser:** The DSL Cruiser packages offer uncapped bandwidth and a choice of connection speeds. You may also choose to implement a fair-use policy, which allows you to set up a list of traffic categories that may not travel on the network. You can adapt this list as requirements change.

- **Bonded DSL:** For a single, high-speed connection with no limitations on bandwidth use or traffic types, Bonded DSL combines up to four ADSL lines to reach speeds of up to 16 Mbps.

All packages come with an ADSL router, which we will set up for you, and which has lightning protection. You also get unlimited incoming faxes (faxes are delivered as attachments to your email inbox) and five public IP addresses, which you can use for email or web servers.

PRODUCT OVERVIEW

EASY MONITORING AND ACCESS TO SUPPORT

Stay in control of usage and costs

Balance performance with costs

Implementing an efficient connectivity solution is a careful balancing act: you need to have stable connectivity and sufficient bandwidth without incurring exorbitant and unforeseen costs. DSL Solutions offers additional features to help you maintain connectivity that keeps pace with business growth and aligns with budget forecasting.

Fixed fees to make budgeting easier

No need to make budgeting for bandwidth a guessing game: DSL Solutions is an affordable connectivity service that comes at a fixed monthly fee, helping you stay in control of overall connectivity costs.

Monitor and manage your bandwidth

Our self-service portal gives you access to usage statistics and reports that allow you to monitor and manage bandwidth usage, and adapt it as demand changes. There are also packages that allow you to exclude traffic in certain categories so that your bandwidth is used only for business and your network is protected from potential security threats.

Benefit from our expertise

DSL Solutions delivers high-speed broadband Internet access to support your critical applications and enable business innovation and growth. Regardless of the bandwidth you choose, we have service level agreements in place to guarantee performance. Our expert engineers are always available, 24/7, to provide any additional support you might need.
